

Oomero for Gaming & iGaming

Age, identity and affordability checks at registration speed.

Licensed gaming operators must verify age and identity before play, screen for sanctions and PEP exposure, and evidence source of funds and affordability at defined thresholds. Oomero delivers those checks in one registration journey.

Threshold-triggered enhanced checks, deposit-linked re-verification and self-exclusion register handling are configured to your licence conditions and retained as evidence per player.

What it does

- ✓ Age verification before play
- ✓ Sanctions, PEP and adverse media screening
- ✓ Threshold-triggered enhanced due diligence
- ✓ Ongoing monitoring of registered players
- ✓ Identity and document verification
- ✓ Source of funds and affordability evidence capture
- ✓ Deposit-linked re-verification
- ✓ Player-level evidence and audit trail

What you get

- ✓ Registration completed in seconds
- ✓ Licence conditions demonstrably met
- ✓ Enhanced checks triggered automatically
- ✓ Reduced manual player review
- ✓ Evidence retained per player

• The Oomero advantage

Why this holds up under scrutiny

01 Speed at registration

Age and identity are verified from data first, so the registration journey is not the reason a player abandons.

02 Thresholds enforced automatically

Enhanced due diligence, affordability and source of funds checks trigger at the deposit and loss thresholds your licence sets, without depending on manual review.

03 Monitoring after registration

Screening and risk signals continue after sign-up, so exposure that appears later is raised rather than waiting for review.

04

Evidence per player

Every check, threshold trigger and decision is held against the player record, ready for a licence review.
